

The heart is a vital muscular organ that pumps blood throughout the body to provide oxygen and nutrients while removing waste products. Heart disease refers to several types of heart conditions including coronary artery disease which affects blood flow and heart rhythm problems known as arrhythmias. Another common type is heart failure where the heart cannot pump blood as well as it should. Common symptoms of heart issues often include chest pain shortness of breath dizziness and palpitations or a racing heartbeat. Remedies and prevention strategies focus on heart healthy living such as consuming a balanced diet low in saturated fats exercising regularly maintaining a healthy weight and avoiding tobacco use. Medical treatments may involve medications to manage blood pressure and cholesterol or surgical procedures to repair damaged vessels and improve overall cardiac function.
